Extra Corporeal ShockWave

**Suggested Treatment
Price \$150**

If your patients are looking for an alternative to steroid injections or surgery, **freeWave** shockwave is your answer. Acute or chronic muscular pain, tendon insertion pain or shoulder, heel pain can significantly damage their natural mobility and quality life!

Radial Extracorporeal Shockwave Therapy (ESWT) is a high frequency medical device. NON-invasive and evidenced based innovative way to treat soft tissue and musculoskeletal pain primarily applied to chronic conditions, often used in combination with **Laser therapy**, particularly those affecting medium to large sized tendons such as:

Plantar Fasciitis
Achilles Tendonopathy
Retrocalcaneal Bursitis
Morton's Neuroma
Peripheral Neuropathy

Lateral Epicondylitis (Tennis Elbow)
Medial Epicondylitis (Golfer's Elbow)
Calcific Tendonitis (supraspinatus tendon)
Patellar Tendinosis (Jumper's Knee)
Chronic Stress/Non-union Fractures

FDA has approved the use of ESWT for the treatment of plantar fasciopathy. However, multiple high-quality randomized clinical trials around the world have provided substantial evidence that ESWT is a safe and effective noninvasive option for treating tendinopathy throughout the entire musculoskeletal system.
